

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1. (Original) A combination sound-deadening board, comprising:
a layer of structural skin; and
a layer of sound-deadening material, wherein the material has an equivalent Young's Modulus between 50 and 600 psi and is attached to the layer of structural skin to form a single laminate structure.

Claim 2. (Original) A building component assembly, comprising:
at least one combination sound-deadening board that is a single laminate structure comprising a structural skin layer attached to a sound-deadening material,
wherein the sound-deadening material has an equivalent Young's Modulus between 50 and 600 psi, and
the at least one combination sound-deadening board is attached to the assembly framing member such that the sound-deadening material faces the assembly framing member.

Claim 3. (Previously Presented) A combination sound-deadening board according to Claim 1, the sound deadening board having a weight density less than or equal to about 14 pounds per cubic foot.

Claim 4. (Previously Presented) A combination sound-deadening board according to Claim 1, the sound deadening board having a weight density between about 9 and about 14 pounds per cubic foot.

Claim 5. (Currently Amended) A building component assembly according to ~~Claim~~ Claim 2, the sound deadening board having a weight density less than or equal to about 14 pounds per cubic foot.

Claim 6. (Previously Presented) A building component assembly according to Claim 2, the sound deadening board having a weight density of between about 9 and about 14 pounds per cubic foot.

Claim 7. (New) The combination sound-deadening board according to Claim 4, wherein the layer of sound deadening material has a thickness between 1/4 and 1 inch.

Claim 8. (New) The building component assembly according to Claim 6, wherein the sound deadening material has a thickness between 1/4 and 1 inch.
